DETAILED ACTION

Allowable Subject Matter

1. Claims 1-13 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. **As per claim 1 and dependent claims 2-5**, the examiner found no reference in the prior art that disclosed or made obvious a method of inspecting the interior of a tire, comprising the step of applying an X-ray to at least two positions, including opposite ends of a tire to take a transmission X-ray image of the tire, as recited in independent claim 1.
4. **As per claim 6 and dependent claims 7-13**, the examiner found no reference in the prior art that disclosed or made obvious an X-ray tire inspection apparatus comprising means for applying an X-ray, wherein the X-ray application means are installed at positions corresponding to at least two positions of a conveyed tire, as recited in independent claim 6.
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

[57]

ABSTRACT

A device for the X-ray examination of motor vehicle tires comprises a conveyor for conveying the tires into, and out of, an X-ray examination device, in which the tires are held in examination positions, are set in rotation and are penetrated by X-rays from within outwards thereof by means of an X-ray tube arrangement, having an X-ray receiver for observing the tire regions which have been penetrated by the X-rays, and a monitor apparatus for optical representation and evaluation of the penetrated tire regions. For improved output of examined tires the X-ray examination device comprises at least two X-ray examination units laterally adjacent to the conveyor. The X-ray receiver is constructed so as to be capable of being moved alternately from one examination unit to the other examination unit, for examination of a tire in one examination unit, while at the same time an examined tire is unloaded from the other examination unit and a fresh tire is loaded thereinto.

7.

8. U.S. Patent 4,949,366 to Collmann, discloses an X-ray tire inspection apparatus comprising at least two X-ray sources; wherein each X-ray source independently inspects a tire positioned within an examination unit. The reference, however, fails to disclose an inspection apparatus wherein X-ray application means are installed at positions corresponding to at least two positions of a conveyed tire as claimed in instant application 10/509,956.
